Disclaimer

This User Guide fully explains the installation and use of PRIMA-4/PRIMA-8/PRIMA-16 KVM switches. Since every precaution has been taken to prepare and write this manual, we assume no responsibility for errors or omissions contained therein, nor any liability for damages resulting from the use of the information in it. Specifications and functions may be changed without prior notice.

FCC Statement

This equipment has been tested and found to comply with the regulations for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with this User Guide, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case, the user will be required to correct the interference at his/her own expense.

CE Statement

This is a Class B product in a domestic environment this product may cause radio interference, in which case the user may be required to take adequate measures.

Table1 Summary for Hotkey Sequences 15

Chapter 1.

Advantages and Features

1.1 Advantages

PRIMA-4/PRIMA-8/PRIMA-16 is a 4/8/16-port cascadable rack mount USB PS/2 KVM switch with OSD control. It provides both USB and PS/2 interface connectivity support on both PC side and console side. It enables the administrator to access, control, boot, and reboot multiple USB and PS/2 computers using only either USB or PS/2 keyboard, video, and mouse.

Centralized computer management from one keyboard, mouse and video

The PRIMA-4/PRIMA-8/PRIMA-16 KVM switch is a quality KVM switch designed for centralized management of multiple computers/servers either in corporate, factory as well as in campus computing environment. Its versatile connectivity support for both USB and PS/2 interface on console side and computer side is especially convenient for a mixed environment with USB as well as PS/2 style computer.

Easy Operation by front-panel buttons, keyboard hot keys, and OSD menu controls

The PRIMA-4/PRIMA-8/PRIMA-16 KVM switch can be easily operated using front-panel buttons, keyboard hotkeys, as well as OSD Menu control. These available control features provide more convenient and effective operation over your daily computer/server management routines and hence more productivity.

Flexible port capacity through multiple daisy-chained KVM switches

In addition to the choice over the different port capacities of the PRIMA-4/PRIMA-8/PRIMA-16, users can also take advantage of its cascadable feature to stack together up to 8 units of the KVM switches. For example, with 8 units of the PRIMA-16 cascaded together, the total port management capacity could easily be scaled up to 128 computers. You can scale the port capacity by daisy-chaining multiple units in different combination according to your real needs.

Saving Time, Space and Money with more productivity

The KVM switches offer special advantages saving time, space and money plus a significant gain over productivity of the server administrative staff. With our KVM switches, you eliminate the need for separate sets of peripherals for each of your computers. The KVM users will also appreciate the neat space on desktop or working bench that is free from multiple sets of keyboards, videos, and mice. On the other hand, the server admin can save lots of time not to shift around separate sets of keyboard and mouse, just to keep up with the server management routines. Hence, the KVM switch could be a tremendous help in facilitating a better and more efficient work environment for server administration, and an indispensable productivity tool for effective server/computer management.

1.2 General Features

1.2.1 LED display for status monitoring

- Numerical LED display for switch bank number
- Front-panel port status LED's for easy port status monitoring

1.2.2 Control features

- Front-panel buttons for direct channel selection
- Auto Scan activated by keyboard hotkey
- Keyboard hotkeys for quick operation commands
- OSD Menu options for more convenient and intuitive control
- Channel selection by front-panel buttons, keyboard hotkeys and OSD Menu control

1.2.3 Security

- Auto Logout feature to lock up computer after a user-configurable timeout
- Password security prevents unauthorized intrusion.
- Provide 8-character password protection.

1.2.4 Cascaded Application

- Auto-detect daisy-chain configuration without setting any dipswitch
- Daisy-chaining up to 8 units for a scalable port capacity up to 128 computers using flexible combination of different switch units
- Numerical LED displays to indicate the switch bank number.

1.2.5 Hardware/Software Support

- Support standard 5-key Microsoft, Logitech mice and compatibles
- Support standard Microsoft, Logitech keyboards and compatibles
- Support a wide range of software platforms: DOS, Windows 95 /98 /SE /NT/2000 /ME /XP/Server 2003/Vista, Unix, Linux and BSD
- Hot plugging of PCs for maintenance without powering down the KVM switch or PC.
- Support video graphic dimensions up to 2048 x 1536 pixels

1.2.6 Power interface

Powered by the external power adapter (9 VDC 1A) connected to the AC power outlet in addition to the USB and PS/2 keyboard/mouse interface power

1.2.7 Cabling requirements

Special USB KVM Combo Cable, or PS/2 KVM Combo Cable, or the Combo-free USB PS/2 KVM Cable.

1.3 Package Contents

The Packaging box of the PRIMA-4/PRIMA-8/PRIMA-16 KVM switch should contain the following items:

- The PRIMA-4/PRIMA-8/PRIMA-16 KVM switch
- Special USB KVM Combo Cable, or PS/2 KVM Combo Cable, or the Combo-free USB PS/2 KVM Cable [Types of cable and number of cable sets will vary according to your option]
- Daisy Chain Cable (M-HDB15-F) cable for cascaded application) x 1
- (Daisy-Chain) Terminator x 1
- Upgrade Cable (F-RS-232-F) x 1
- Power adapter (AC to DC 9V 1A) x 1
- Rack Mount Kit x 1
- This User Guide x 1
- A Quick Installation Guide x 1

1.4 Front Panel

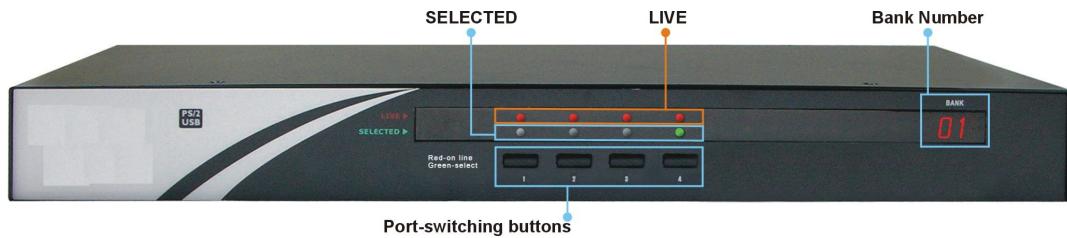

Figure 1: PRIMA-4 Front Panel

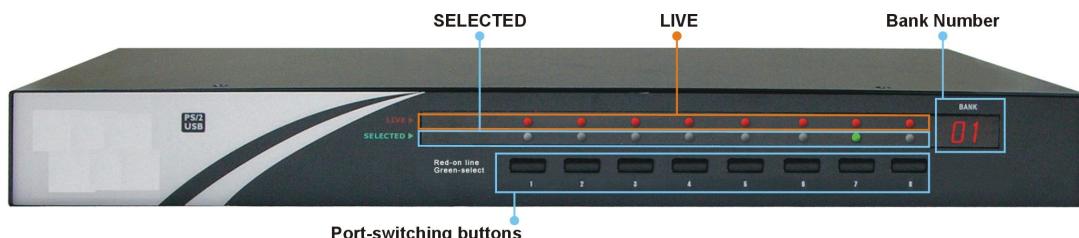

Figure 2: PRIMA-8 Front Panel

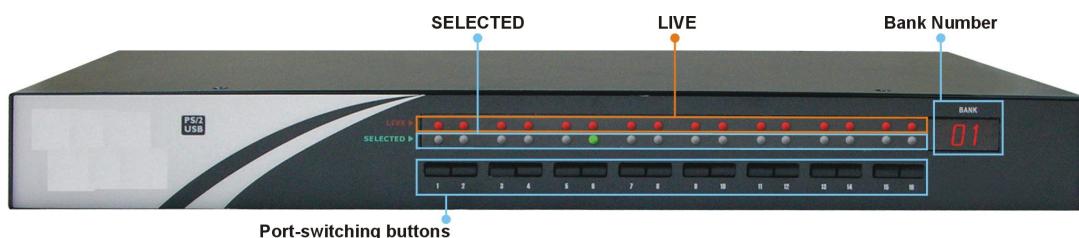

Figure 3: PRIMA-16 Front Panel

1.4.1 Buttons

Press to switch to the corresponding port.

1.4.2 Numerical LED Displays and Indicators

The Numerical LED display on the front-panel shows the switch bank number.

The Port Status is indicated by a set of two LED indicators:

- The Live LED -- lit red when the computer is connected to the KVM switch and feeding power through the PS/2 or USB interface.
- The Selected LED – lit green when the computer is currently selected as the active channel

Thus, the red LED shows the current connected state of the specific port. The green LED indicator indicates the currently active channel.

Note that a red-lit LED means only that the specific port is connected and being powered through its PS/2 interface. It does not indicate whether that connected computer is in powered-on or powered-off state.

Note that a green-lit LED means only that the specific port is selected to be the active channel. It does not indicate whether that connected computer is in powered-on or powered-off state.

1.5 Back Panel

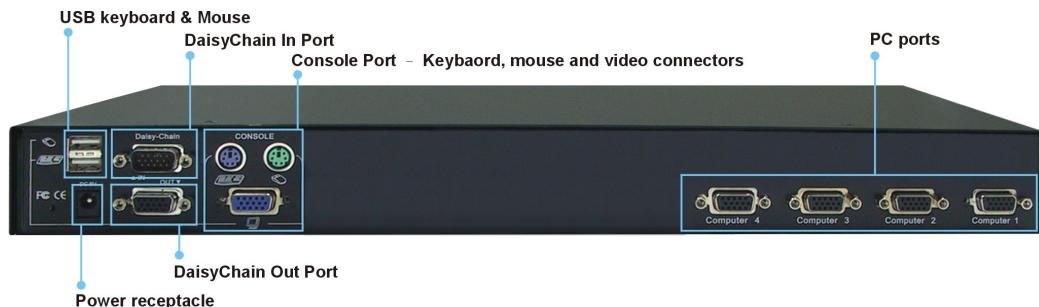

Figure 4: PRIMA-4 Back Panel

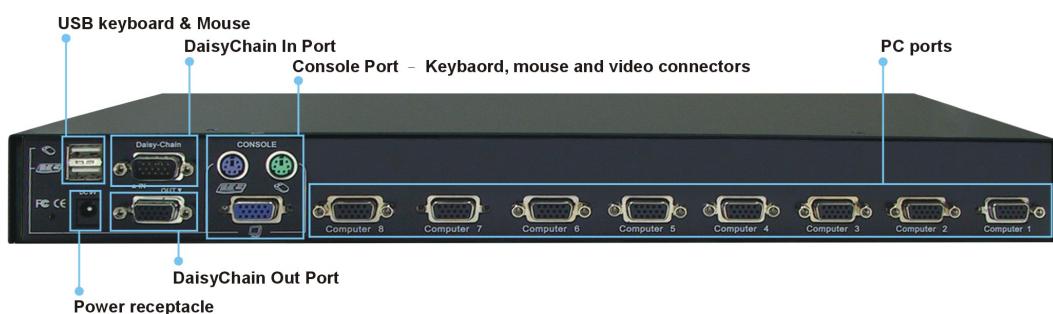

Figure 5: PRIMA-8 Back Panel

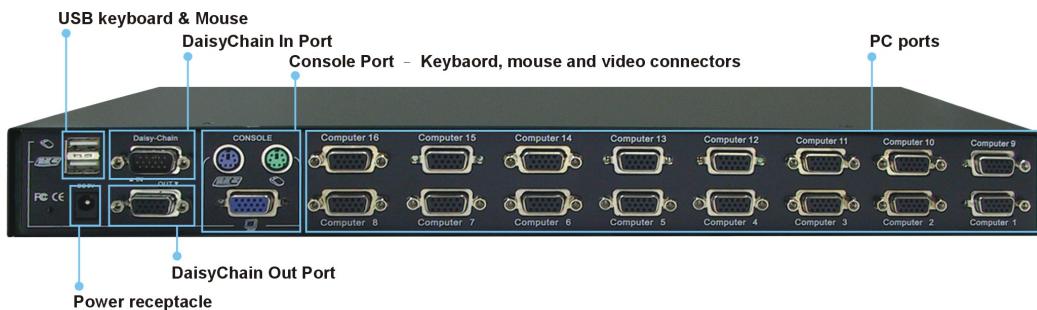

Figure 6: PRIMA-16 Back Panel

1.5.1 Power Jack

The power jack should receive electricity from a 9VDC 1A power adapter cord. Its center pin is of a positive polarity.

1.5.2 Console Port

The console port provides keyboard and mouse connectors for PS/2 as well USB interface, and a HDB 15 video connector for the monitor/LCD display.

1.5.3 PC Ports

The PC ports are HDB 15 connectors integrated with USB and PS/2 keyboard, mouse, and video. To connect a PC port to one of your computer, you may either use USB KVM Combo Cable, or PS/2 KVM Combo Cable, or Combo-free USB PS/2 KVM Cable, depending on your package option.

1.5.4 Daisy Chain Port

The daisy chain IN port is of a HDB15 male connector, where you can daisy chain upstream to a Prima KVM switch.

The daisy chain OUT port is of a HDB 15 female connector, where you can daisy chain downstream to a Prima KVM switch.

1.6 Installation

Before installing the KVM switch, you should run through the following peripheral checklist to ensure a proper setup of your KVM switch....

1.6.1 Checklist before Installation

To install the PRIMA KVM switch, check that you have the following elements:

- Suitable cables to connect the KVM switch to the keyboard, video, and mouse ports of each of your PC.
- A monitor with a standard D-sub 15-pin video connector (HDB-15) that you have verified to be working when connected directly to each of your PCs.
- A standard USB (or PS/2) style Microsoft or Logitech keyboard.
- A standard USB (or PS/2) style Microsoft or Logitech compatible 5-key mouse
- The Daisy-chain cable(s) if you need to connect multiple units of Prima KVM switch.
- The terminator if you need to daisy chain multiple Prima KVM switches.

Figure 7: PRIMA USB/PS2 PC Cable Assembly

Figure 8: Daisy Chain Cable

**Figure 9: Upgrade Cable****Figure 10: Daisy Chain Terminator**

1.6.2 Mounting the Prima KVM switch

The KVM switch can be mounted either on desktop or on a standard 19" rack.

To adapt to different port capacity requirements, you are able to use the KVM switch either in single unit configuration or in multiple cascaded application.

Connect Your PCs and Peripherals to a Single Prima KVM switch

Step 1. Connect the shared USB (or PS/2) keyboard, mouse, and monitor to the console connectors on the backside of the KVM switch.

Step 2. Connect the power adapter (9 VDC 1A) cord to the KVM switch to power it on.

Step 3. Connect each computer to the KVM switch using an appropriate KVM cable for your convenience, then power on each computer

Now the KVM switch is ready to operate as soon as you turn on any of the attached computer.

⚡ Only when you are going to connect a PS/2 PC, will it be required that the KVM switch have to be powered on and properly connected to your computers before booting up any computers. Please follow the correct KVM system boot-up sequence. The reason is that: while your PC is booting up, the PS/2 interfaces on the connected computer have to communicate with your keyboard and mouse and consequently gets response from them. If your KVM switch has not been running and connected to your PC, your PC might have difficulty recognizing keyboard and mouse, even if you turn on the KVM switch later on. On the other hand, your KVM switch also has to be present to keep track of all the modes and parameters requested by the OS running on each connected PS/2 PC.

⚡ The cable distance from your keyboard, video, and mouse to your PC should be within 7.6 m to ensure signal quality and proper transmission. If you want to extend the distance over, use of a Cat5 Extender is recommended.

1.6.3 Daisy-chaining Several Prima KVM switches

If you use only a single KVM switch and hence have no need for cascaded application of multiple KVM switch units, just skip this section.

To add port capacity, multiple PRIMA-4/PRIMA-8/PRIMA-16 KVM switches can be cascaded in a daisy-chain configuration. You can maximize the number of connected computers up to 128 computers (with 8 units of PRIMA-16 KVM switches). This cascaded application is advantageous when you want centralized console management over all these groups of computers. KVM controls can then be extended to groups of computers connected on the daisy chain of Prima KVM switches.

The Prima KVM switch units that are to be daisy-chained do not have to be of the same port capacity. In fact, you can daisy chain different units with different port capacity as to scale the total port capacity more flexibly.

Before connecting any PC or peripherals to your Prima KVM switch, it is recommended that the power adapter be plugged into the KVM switch to power it up properly.

Step 1. Connect the shared keyboard, PS/2 mouse, and monitor to the console port connectors on the rear panel of the master (first) Prima KVM switch.

Step 2. Connect the power adapter cord to power receptacle on the master Prima KVM switch.

Step 3. Use a daisy-chain cable (M-HDB15-to-HDB15-F) to connect the daisy chain OUT port of the master Prima KVM switch to the daisy chain IN port of the second (downstream) Prima KVM switch. Then connect the power adapter cord to power on the second Prima KVM switch.

Step 4. If there is yet another third KVM switch to be daisy-chained, just repeat step 3 to connect the daisy chain OUT port of the second switch to the daisy chain IN port of the third KVM switch. Likewise, follow the same connection procedure if there is still more KVM switches to join in the daisy chain.

Step 5. After you have set up the daisy chain of Prima KVM switch, just plug the terminator into the Daisy-chain OUT port of the last Prima KVM switch.

Step 6. After you have set up and powered up the daisy-chain connection of multiple KVM switches, these daisy-chained KVM switch units will be initialized immediately for your operation

Step 7. Connect each computer (If you are going to connect a PS/2 computer, you have to connect it in its powered-off state) with either with the USB KVM combo cable or the PS/2 KVM combo Cable, or the Combo-free USB PS/2 KVM cable for your convenience. Then power each computer on.

The KVM switch has to be turned on and properly connected to your PC before booting up any PC. Please follow the correct boot-up sequence. The reason is that: while your PC is booting up, it has to communicate with your keyboard and mouse and consequently gets response from them. If your KVM switch has not been already running and connected to your PC, your PC might have difficulty recognizing your keyboard and mouse, even if you turn on the KVM switch later on. On the other hand, your KVM switch also has to be present to keep track of all the modes and parameters requested by the OS running on each connected PC.

Now the KVM switches are ready to operate as soon as you turn on any of the connected computers.

Firmware upgrade via "Daisy-chain In" port through a host computer (RS-232)

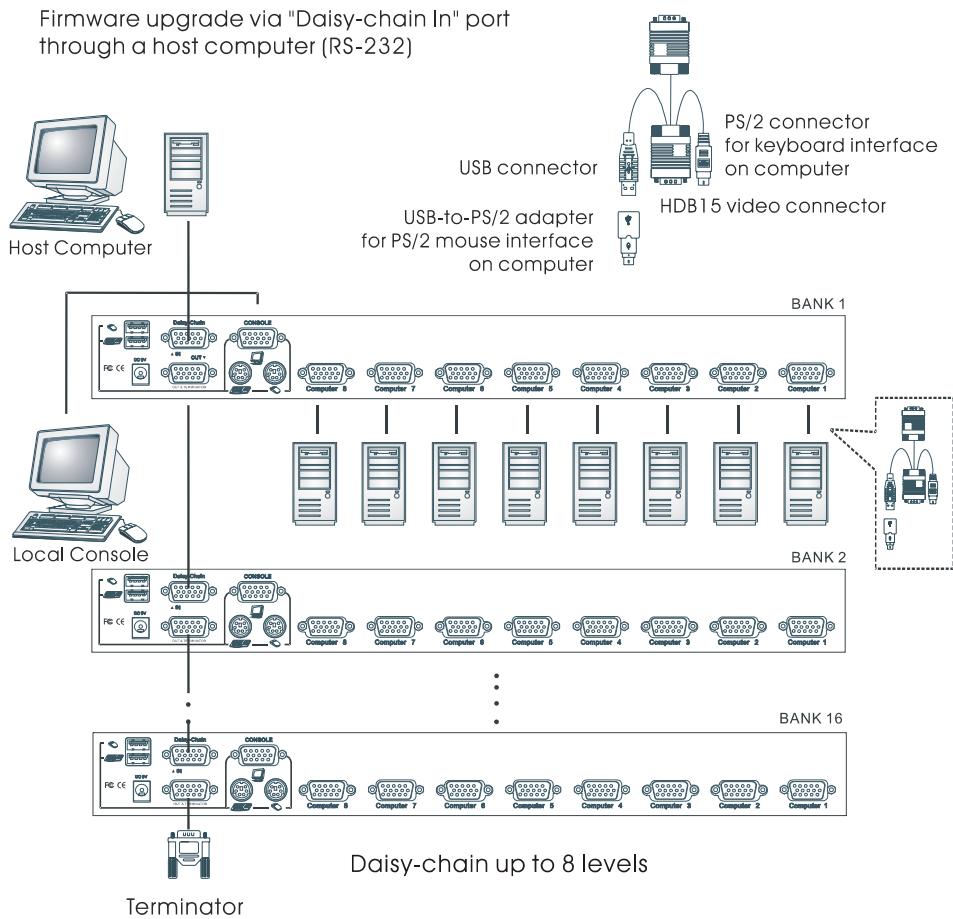

Figure 11: Daisy-chaining multiple Prima KVM switches in a cascaded application

Chapter 2. Prima Switch Operation

This chapter provides general guidelines for the KVM switch operations. Before you begin operation of the KVM switch, it is strongly recommended that you read this chapter in advance.

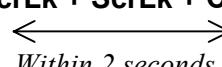

There are three ways to operate your PRIMA-4/PRIMA-8/PRIMA-16 KVM switch—either by Front-panel buttons, keyboard hotkeys, and OSD Menu options. The operation details of these three control methods are detailed as follows:

2.1 **Front-panel Buttons**

The front panel push buttons are used to directly select the active computer channel that can be controlled by the shared keyboard, mouse, and monitor. Pressing the key during normal operation will cause the corresponding channel to be selected.

2.2 **Keyboard Hotkeys**

Most of the hotkey control commands are preceded by two consecutive Scroll Lock keystrokes (done within 2 seconds), and then followed by specific command key or key sequence:

Hotkey control command = ScrLk + ScrLk + Command key (sequence)

Within 2 seconds

In most cases, it will take at least three keystrokes to complete a command. In certain case, it will need 6 strokes (such as in selecting specific bank and port number for active channel) to complete one.

All the available hotkey commands and OSD Menu options are summarized in the following table for your convenience.

Command	Hotkeys / OSD Menu option
Select PC	ScrLk + ScrLk + (a) + (b) + (y) + (z) ab = 2-digit bank number yz= 2-digit channel number
Next lower channel	ScrLk + ScrLk + ↑ (arrow up)
Next higher channel	ScrLk + ScrLk + ↓ (arrow down)
Next lower bank	ScrLk + ScrLk + PgUp
Next higher bank	ScrLk + ScrLk + PgDn
Auto Scan Beep Sound On/Off	ScrLk + ScrLk + B
Load Default	[OSD Main Menu/Setup/Load Default]
Load Default All	[OSD Main Menu/Setup/Load Default All]
OSD Title Bar ON/OFF	ScrLk + ScrLk + T
Change PC Name	[OSD Main Menu>Select and hit Enter to edit name]
Reset/Reinitialize KVM System (Whole daisy-chain)	ScrLk + ScrLk + End
Show OSD Menu	ScrLk + ScrLk + (Space Bar)
Auto Scan	ScrLk + ScrLk + S
Stop Auto Scan	Any key
Auto Scan Period	[OSD Main Menu/Setup/Auto Scan Period]
Auto Logout Timeout	[OSD Main Menu/Setup/Auto Logout]
OSD Menu Timeout	[OSD Main Menu/Setup/OSD Timeout]
OSD Title Bar ON/OFF	ScrLk + ScrLk + T
OSD Title Bar Position	[OSD Main Menu/Setup>Title Bar]
Setup Password	[OSD Main Menu/Setup/Setup Password]
Upgrade Firmware	[OSD Main Menu/Setup/Upgrade Firmware]

Table 1: Hotkey Sequences

Notes: a, b, y and z each denotes a number key. (ab) = 01 ~ 16 ; (yz) = 01 ~ 04 or 01 ~ 08 or 01 ~ 16.

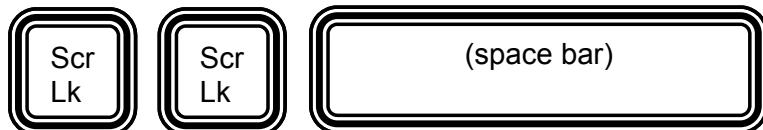

2.3 On Screen Display

Note that while OSD is activated, all the front-panel buttons and mouse activity will be made inactive.

To activate the OSD Menu, use the hotkey sequence

Show OSD Menu =

OSD (On Screen Display) is a menu that is superimposed on your screen display. On the OSD Menu, you will see a listing of the available banks and channels for selection and the currently online status of each channel. You can use the OSD to control the KVM switch with more convenient and intuitive menu-driven operation. The OSD menu also allows you to rename your computer (up to 8 characters), and to find a specific computer by its name. It also allows you to password-protect your KVM switch system.

2.3.1 OSD Main Menu

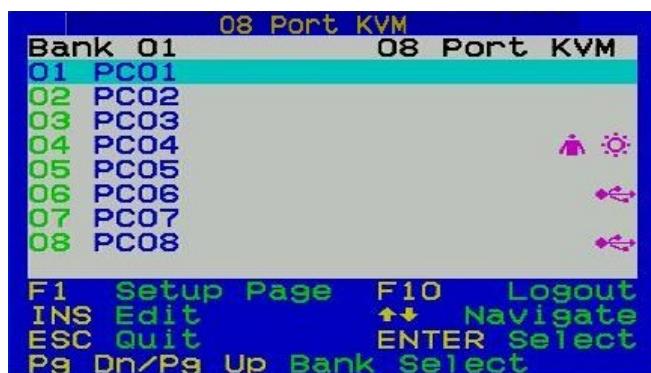

Figure 12: OSD Main Menu

The computer name that is followed by a human symbol, , means that computer is currently the active channel you can monitor on your local console now.

The computer name that is followed by a little solar symbol, , indicates that it is currently connected to the KVM switch via PS/2 interface and feeding power to the KVM switch.

On the other hand, the computer name that is followed by a USB symbol, , indicates that it is connected to the KVM switch via the USB interface and feeding power to the KVM switch. Others that are not seen with either of both symbols after them are currently either not connected, or the PS/2 or USB interface does not feed power to the KVM switch.

The computer name that is inversely illuminated by a background color indicates that it is currently in focus, and you can perform operation on it by your keyboard.

- | | |
|----------------------|----------------------|
| F1 : | Go to the Setup Page |
| F10 : | Logout |
| INS: | Insert to edit |
| Esc: | Quit |
| PgDn / PgUp : | Bank Select |

Use the left, right, up, down cursor keys to navigate. Hit Enter key to select and Insert key to edit. On the bottom part of the OSD menu, there are OSD operation tips for your reference.

2.3.2 OSD Setup Menu

Figure 13: OSD Setup Menu

- Auto Logout:** Specify time for auto logout (00~99 min)
OSD timeout: Specify duration for OSD Menu to stay on screen.
Autoscan period: Specify time for auto scan period.
Title Bar: Specify the position of the OSD title bar.
Hotkey: Specify the hotkey preceding sequence. Can be SCROLL LOCK, CAPS, ESC, F12 or NUM LOCK.
Setup Password: specify the password for access
Load Default: load the default settings
Load Default All: load default settings to all daisy-chained units
Upgrade Firmware: upgrade the firmware of the KVM switch

2.4 Operate the Switch

The followings describe each command operation of the KVM switch and available ways to execute the command, either by a front-panel button, a keyboard hotkey sequence, or an OSD Menu option.

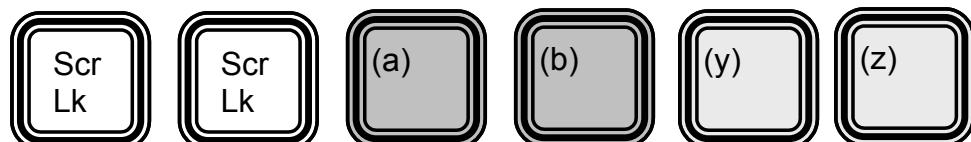

2.4.1 <Select PC>

Front-Panel Button

Press the corresponding button on the specific switch, to which the channel you want to select is connected.

Hotkey

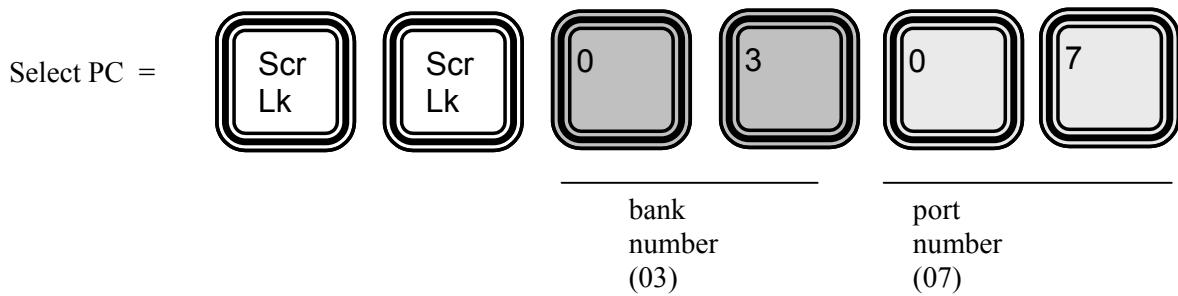

Select PC =

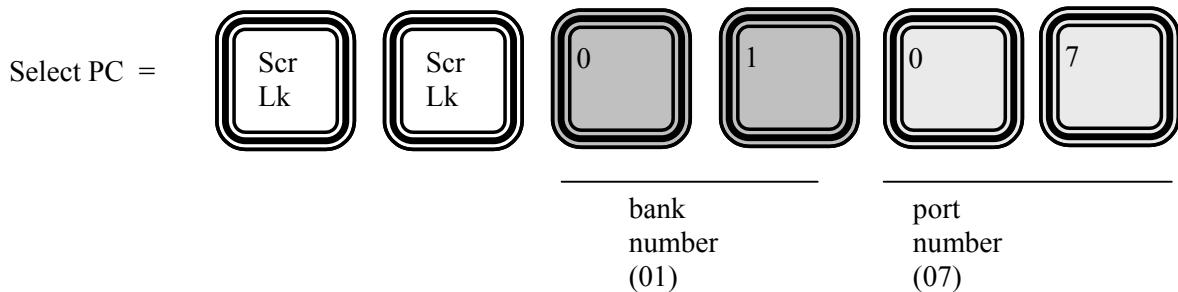

bank
number
(01 ~ 16)

port
number
(01 ~ 16)

For example, when with a configuration of multiple daisy-chained Prima KVM switches, if you want to select bank 3 port 7, you should press the following keystrokes:

However, when using single KVM switch configuration, if you want to select port 7, you should first press its default bank number 01 and then the port number 07:

Since the single KVM switch bank number is default to 01 (i.e. itself a master KVM switch on its own), therefore you should always specified its bank number by “01”.

OSD

To switch to a specific PC using the OSD Menu, you have to activate the OSD Menu first, Hit ScrLk + ScrLk + Space Bar to activate the OSD Menu. Then use the cursor keys to navigate to the channel you want and then hit Enter key to select the PC channel.

In a daisy-chained configuration, you may want to select specific channel on a specific bank (when you have daisy-chained multiple KVM switch units), just use the Page up/Page Down key for bank selection and navigate the OSD Menu by cursors key to the channel you want and hit Enter to make it your active channel.

2.4.2 <Next lower channel>

Hotkeys

2.4.3 <Next Higher Channel>

Hotkeys

2.4.4 <Next Lower Bank> (when daisy-chained)

Hotkeys

Previous bank =

OSD

While the OSD is activated on the console screen, press the Page Up key to rotate through the bank selections upwards.

2.4.5 <Next Higher Bank> (when daisy-chained)

Hotkeys

Next bank =

OSD

While the OSD is activated on the console screen, press the Page Down key to rotate through the bank selection backwards.

2.4.6 <Beep Sound On/Off>

While auto Scanning, port-switching or issuing a hotkey command, a beep sound will be heard. If you want to turn on/off this beeping, try the following hotkey sequence.

Hotkey

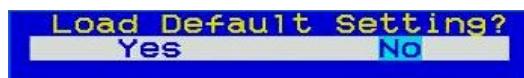

Beep sound on/off =

2.4.7 <Load Default>

OSD

While you can freely change the computer names, auto scan time, auto logout timeout, etc., there might be times when you want to restore the switch to its default factory settings. If this is the case, you can always access the OSD Menu option – Load default – to restore the KVM switch to the factory default.

Note that Load default will not affect your password setting, thus will not compromise your KVM switch access security.

2.4.8 <Load Default All>

The Load Default All option is used when you want to load factory default not only to the master Prima KVM switch, but to all Prima KVM switches in the daisy-chain. If you need to load factory default to all daisy-chained Prima KVM switches, you should use this Load Default All option instead of the Load default.

Note that Load default all will not affect your password setting, thus will not compromise your KVM switch access security.

2.4.9 <Change PC Name>

OSD

Navigate to the PC Name you desire to change, and then press Enter or Insert key for editing a new PC name. When done, press Enter to validate the new name.

2.4.10 <Reset/Re-initialize KVM System (whole daisy-chain)>

Hotkeys

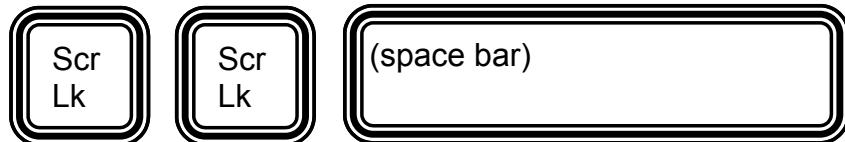

Reset/Re-initialize KVM System =
(Whole daisy chain)

2.4.11 <Show OSD Menu>

Hotkey

Show OSD Menu =

2.4.12 <Auto Scan>

Hotkey

Auto Scan =

The auto scan function automatically scans through each connected channel and stay for a specific time that is programmable by user (5 ~ 99 seconds). The purpose of auto scan is to provide you with a quick browsing of the status of all connected channels without tedious manual switching one by one. You will appreciate this function especially when there are many computers connected on your switch.

TO STOP Auto Scanning, just press any button on the front panel or hit any key on keyboard to terminate auto scanning immediately.

2.4.13 <Auto Scan Period>

OSD

Use cursor keys to navigate to the auto scan period option on the OSD Menu, and then hit Enter to select and edit the auto scan period. The auto scan period is default to 10 seconds. The period time of auto scan could be specified within the range of 5 seconds to 95 seconds by an increment of 1 second. Users can adjust the scan period according to their needs.

2.4.14 <Auto Logout Timeout>

OSD

Use cursor keys to navigate to the Auto Logout option on the OSD Setup Menu, and then hit Enter to select and edit the timeout value of the auto logout. The OSD Menu Timeout is disabled by default. You can specify a timeout value between 0 and 99 min. [00 means disabled]

2.4.15 <OSD Menu Timeout>

OSD

The OSD Menu Timeout is the time for the OSD display to stay on the screen if no keyboard activity is detected while the OSD Menu is displayed. Use cursor keys to navigate to the OSD Timeout option on the OSD Setup Menu, and then hit Enter to select and edit the OSD Menu Timeout. The OSD Menu Timeout is default to 60 seconds. The OSD Menu timeout can be specified within the range of 5 seconds to 95 seconds by an increment of 1 second. Users can adjust this parameter to suit their needs.

2.4.16 <OSD Title Bar ON/OFF>

Hotkey

The OSD Title Bar will show the computer name on the screen. You can toggle the OSD Title bar ON/Off just by the hotkey:

OSD Title Bar ON/OFF =

D101 PC01

2.4.17 <OSD Title Bar Position>

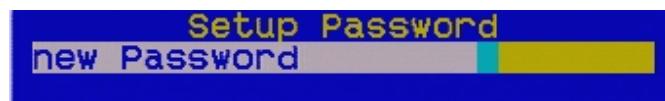

OSD

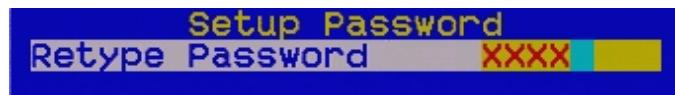

You can select the OSD Title Bar Position to be either on the left or right side of the screen. Use cursor keys to navigate to the OSD Title Bar option on the OSD Setup Menu, and then hit Enter to select and cursor key to toggle the Left/Right option. The OSD Menu Timeout is default to 60 seconds. The OSD Title Bar Position is default to left side of the screen.

2.4.18 <Setup Password>

OSD

Navigate with cursor keys downward to the Setup Password option on the OSD Setup Menu, and then hit Enter key to select. Just follow the submenu to Enable or Disable the Password Protection. Every time you want to change the password configuration, you will be prompted for the current password. You have to type in the correct password to validate the change. The password is up to 8 characters long and is default to 00000000. Later you can change the default password with your own by this option.

The Setup Password function is default to Disabled. On the other hand, if the password protection is enabled, it means every time when the KVM switch is reset, it will prompt the next user for password input. This feature will ensure further security over local console to ward off the possibility of any bad intention or accidental tempering of your server management by unauthorized persons. If you have a great concern over local console security, you should have the password protection enabled by this OSD option. Then next time when you will leave the local console, you can then Logout the KVM switch. Then the KVM switch will prompt next user for correct password to gain access to KVM operation, thus your local console security cannot be compromised anymore even when you are not present.

If you ever forget your password and have been prevented from local console access, please contact your local dealer for technical support.

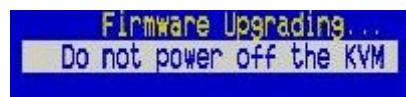

2.4.19 <Upgrade Firmware>

OSD

The Upgrade Firmware option should be selected only when you want to upgrade firmware contents of your Prima KVM switch. Just use the cursor keys to navigate to the Upgrade Firmware option on the OSD Setup Menu, and then hit Enter key to select. Then you will a prompt ask you for confirmation.

Select Yes and hit Enter to make the Prima KVM switch go into firmware upgrade mode... However, to upgrade firmware, you also have to prepare a host computer and the firmware upgrade file. For further details, please refer to the Firmware Upgrade Operation Guide.

While upgrading your firmware, an OSD message will show forth to remind you not to power off the KVM while upgrading firmware.

Appendix A

Technical Specifications

<i>PC connections</i>	4 PCs max. (PRIMA-4) 8 PCs max. (PRIMA-8) 16 PCs max. (PRIMA-16)
<i>Console connection</i>	1 console
<i>PC port connector (All female type)</i>	HDB 15 connector (integrated with USB and PS/2 keyboard/mouse and video)
<i>Daisy-chain port connectors</i>	HDB 15 Male (Daisy Chain IN) HDB 15 Female (Daisy Chain OUT)
<i>PC selection</i>	OSD Menu, Hotkeys, Push buttons
<i>Numerical LED Display</i>	Bank Number Display
<i>LED indicators</i>	Two LED indicators for each PC port
<i>OSD control</i>	Yes
<i>Scan period</i>	5 – 95 seconds programmable
<i>Keyboard emulation</i>	PS2 and USB
<i>Mouse emulation</i>	PS2 and USB
<i>VGA Resolution</i>	2048 × 1536
<i>Daisy Chain Levels</i>	8 x levels
<i>MAX PC Connection</i>	128 (8 x PRIMA-16)
<i>Housing</i>	Metal
<i>Power Adapter</i>	DC 9V 1A
<i>Operation Temperature</i>	0 ~ 40°C
<i>Storage Temperature</i>	-20 ~ 60°C
<i>Humidity</i>	0 ~ 90% RH, non-condensing
<i>Size</i>	19" Rack Mount / 1 RU
<i>Weight</i>	1.9 kg (PRIMA-4) 2.0 kg (PRIMA-8) 2.2 kg (PRIMA-16)
<i>Dimensions (mm)</i>	408.5 × 165 × 45 (L × W × H)
<i>Safety / EMI</i>	CE, FCC
