Examples of use

Connection of workstations and servers; Implementation of ATM / Ethernet cost-effective border routers; PPPoA and PPPoE DSLAM connections; Traffic generation for AAL0, AAL2 and AAL5 test benches; Monitoring; Transmission of video and/or sound into several independent channels.

Operating System Compatibility

On Windows 10/XP/Vista/7/8: The [PROATM-WDM](#) driver allows for Classical IP (RFC 1577) and Multiprotocol (RFC 2684) connections. It supports the UBR, CBR and VBR Qualities of Service. It is compatible with Winsock.

On Windows XP: The [NDIS 5.0 driver](#) gives access to the Microsoft ATM software layers. It supports the UBR, CBR, VBR and ABR Qualities of Service and is compatible with Winsock2.

On Linux: A rich set of functions is available on this operating system. Download the linux-atm package from [ATM on Linux](#) or [linux-atm-2.4.1](#). The [proatm-linux](#) driver runs on Linux kernels 2.6.x and 3.x.x. It supports the UBR, CBR, VBR and ABR Qualities of Service and manages the OAM cells automatically. It is provided as open source software.

On FreeBSD: The [proatm.tar.gz](#) driver runs on FreeBSD 3.5, 3.51, 4.1 and newer. With 5.xx kernels, use the new PATM driver. The card and the driver comply with the HARP ATM software and support the UBR, CBR and VBR Qualities of Service.
